(FOR IMMEDIATE RELEASE)

## **R&D LifeSciences Launches Lactomace™ Digestibility Enhancer And Feed Utilization Conditioner**

**July 2010, Menomonie, WI** – R&D LifeSciences, LLC, announced today that they have developed **Lactomace™** – a proprietary combination of dried *Bacillus subtilis*, *Aspergillus oryzae* and *Trichoderma viride* fermentation products specifically formulated to increase appetites (especially under stress), digestibility and feed utilization of feed by dairy cattle.

According to Dave Cook, PhD, Director of Technical Services for R&D LifeSciences, Lactomace™ is backed by several years of university and private dairy performance trials that show a marked increase in fiber digestibility, which contribute to increased body weight gain, increased milk yield, improvement in calculated net energy for lactation and multiple health and production efficiencies. Dr. Cook notes. “Lactomace used at 3-10 g/h/d in early lactation showed a 5% increase in DMI, increased NDF (fiber digestibility) intake of 7% and 17% increase in energy for lactation. Lactomace showed a 49% increase in nitrogen (N) utilization as well as a 116% increase in phosphorus (P) utilization. These are impressive performance and enhancement numbers that should get the dairy nutritionist and manager excited, especially at the economical inclusion rates.”

Lactomace™ is available in granular forms in 50-lbs (22.7 kgs) bags or in liquid form in either 1-gal. jugs or 55-gal. drums. All R&D LifeSciences products are available through distribution partners **Anipro XFormance Feeds** ([www.anipro.net](http://www.anipro.net) or 800-558-3341), **International Nutrition, Inc.** ([www.ini-agworld.com](http://www.ini-agworld.com) or 402-331-0123) and **Nutra Blend LLC** ([www.nutrablend.net](http://www.nutrablend.net) or 800-657-5657)

For more information, pricing and the location of an R&D LifeSciences dealer near you call 1-877-874-0125, 715-231-2150 or visit [www.RDLifeSciences.com](http://www.RDLifeSciences.com).
